

I am a student living in the dorms. How do I connect my laptop or desktop to the wired network?

1. Plug an Ethernet cable into working network port.
2. Turn computer on.
3. Launch web browser (Internet Explorer, Mozilla Firefox etc...) the Fairmont State Network Registration Login page will load.
4. Enter your UCA and password.
5. Click the Login button.
6. You will be asked for the type of computer (Guest or Student). Select Student Computer option from the list.
7. Click the Register Computer button. You may be asked what type of network you are logging onto (home, work or public). You may choose the option that you prefer.
8. When the process is complete, a page will appear that indicates that the registration has been successful. During this process you can test the connection by opening a **second** browser window to see if your home page loads. If it does, then the process is complete. If not, continue waiting.
